Release human staff to perform meaningful work

4th INDUSTRIAL REVOLUTION

Restore the Management Productivity lost

Increase Productivity

Identify Blockages

Ensure Delivery

Decrease Risk

Reduce Cost

Overview

CWF Process CyberManager addresses the problems created by remote management whilst significantly:

- Reducing CAPEX and OPEX,
- Increasing productivity,
- Improving service delivery,
- Decreasing risk.

Your business can take on the same levels of work as before.

If your managers and staff are struggling to deliver to the same level of productivity and profitability in a changing world *then you need this ...*

Cyber workforce (Pty) Ltd is a Multi-disciplined International Consulting Company focused on effective Service Delivery Information System Solutions.

Cyber-WorkForce tracks and manages any of your processes using Robotic assistants to relieve your human staff of all the menial tasks that take up their time

- The Business Process Cyber-Manager mimics email, which is normally how organisations pass process documentation from one person to the next - nothing changes.

Retain the "email way" but automate and track your processes

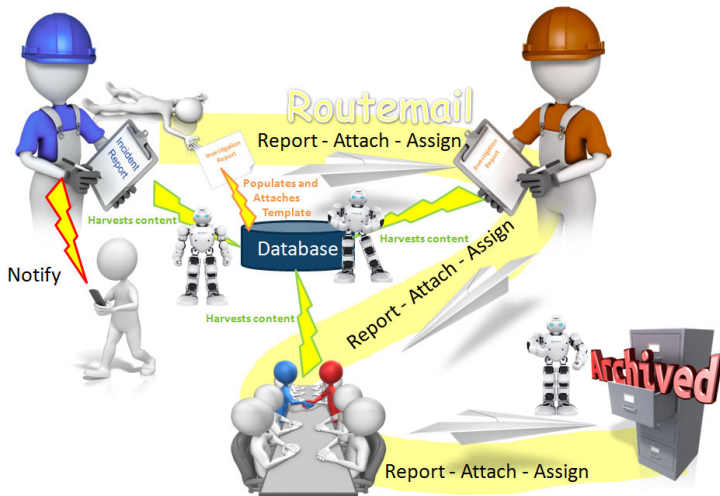

- It can also make use of SmartPDF CyberDoc® Robots to automatically harvest information that needs to be captured into a datastore for analysis.
- Any tasks or micro-processes that can be delegated to robots are handed over to the Cyber-WorkForce releasing human staff to carry on with more meaningful work,
- As with email, you can attach any electronic document, picture, spreadsheet, etc to the CWF Process Manager and it can also be "booked out" and modified by anyone who has rights along the process,
- The process steps that are followed are predefined, making as if the SOP's are on railway tracks, with robotic automation of tasks and performance monitoring by exception, enabling effective remote management,
- Unlike traditional email it can be sent to multiple people to be worked on at the same time and it cannot get lost or deleted, enabling the "work from home" method of operating,
- The document management robot continuously ensures all documents are safe and secure wherever the staff member is working from.

Give your human employees Robotic assistants

Enter the 4th Industrial Revolution with Robotic Process Automation and take the load off your staff

Example of how CWF enables a SHEQ Incident Management Process

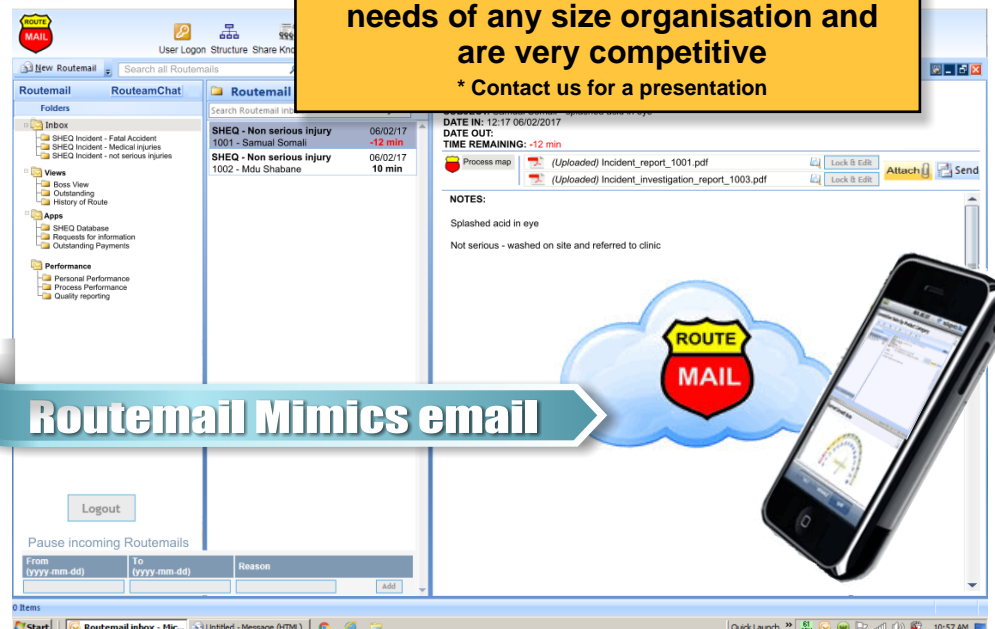

Use the Process CyberManager to integrate your **existing** documents and information systems - you don't have to conform to an integrated computer system (best fit) and be subject to its constraints in specialised areas of your business - continue to work the way you are presently and let our Cyber-WorkForce integrate and collate your information using your current documents and way of doing things.

It can even harvest the *Contents* of the documents when they are attached and write it into a database.

Nothing Changes for your staff

Our pricing models embrace the needs of any size organisation and are very competitive
* Contact us for a presentation

The CWF Business Process robot retains the same look & feel as using email meaning you don't have to change the way you are currently doing things or train your staff on a new workflow system - carry on exactly as you are currently doing things (but without the problems) and with Robotic assistants helping your human employees.

Routemail Mimics email

(see the detailed pamphlet on implementing COBIT and ITIL)
